A Passionate Computer Vision Engineer

WORK EXPERIENCE

Deep Learning Intern | Buildables

Jun 25 – Sep 25

- Acquired proficiency in Python and key libraries including **NumPy**, **pandas**, **matplotlib**, and **seaborn**. Utilized **Selenium** and **Crawl4AI** to efficiently scrape data and store it in Google Sheets, automating the entire workflow with **GitHub Actions (CI/CD)**.
- Explored both **supervised** and **unsupervised** learning algorithms, including Decision Trees, Support Vector Machines, Random Forests, Logistic Regression, K-Nearest Neighbors (KNN), K-Means Clustering, Hierarchical Clustering, DBSCAN, and Principal Component Analysis (PCA).
- Developed expertise in deep learning neural networks, including **CNNs**, **RNNs**, **LSTMs**, and **Transformer models**. Designed and implemented a Google Calendar management chatbot using **Langchain**.

Data Engineering Intern | Bytewise Limited

Jun 24 – Sep 24

- Learned core data engineering concepts, including **Databases**, **Data Lakes**, **Data Warehouses**, **ETL/ELT processes**, and **ERDs**.
- Developed proficiency in **SQL** (DDL, DML, joins, subqueries) and built **data pipelines** using **Python** and **Docker**.
- Gained hands-on experience with **Microsoft Azure**, including **Azure Databricks**, for data ingestion (CSV, JSON), transformations, and **Spark SQL** for big data processing.
- Explored **Snowflake** for cloud-based data management, including loading and querying semi-structured data (XML, JSON).
- Applied skills to a **Formula 1 Race Data Analysis** project, performing end-to-end data ingestion, transformation, and analysis using **Azure**.

Open-Source Contributor | GirlScript Summer Of Code

May 24 – Jul 24

- Contributed to open-source projects by building and enhancing web applications using **HTML**, **CSS**, and **JavaScript**.
- Collaborated with developers globally to improve front-end interfaces, fix bugs, and optimize user experiences.
- Gained hands-on experience in **full-stack development** and version control using **Git** and **GitHub**.

Hackthone | Hackfest

July 11 – Jul 14

- Collaborated with a team of developers to build an AI agent capable of delivering real-time product demos using voice based interaction.
- Used **AssemblyAI** for voice recognition, Language model **LangChain**, **ChatGrok**, **llama3-8b-8192** and **LangGraph** for LLM tool chaining, **Selenium** for browser controlling and **Streamlit** for Frontend.
- Reached 1st Round out of 200+ teams.

PROJECTS

VisGuard | [Link](#)

- VisGuard is mutli-stream real-time analytical dashboard that detect (person, vehicle, weapon, and fire) and let user create multiple zones. It also triggers real-time alert notifications for unfortunate activity. VisGuard allows users to search for an event using natural language.
- It uses **OpenCV** for video processing, **Ultralytics Yolo26n** for object detection on **dataset annotated using**

Roboflow and **React** for UI.

- We use **histogram approach** and **CLIP** model for keyframe extraction, gemma model for caption generation and **e5-small-v2** for vector embeddings and **milvus** to store embeddings.

LipReading App | Deep Learning Model (Conv3D + LSTM) | [Link](#)

- A Deep Learning based LipReading app design to detect silent lip movements using Conv3D and LSTM models.
- It uses **OpenCV** for video processing, **Tensorflow** for training Deep learning Models on **GRID dataset** and **Streamlit** for UI.

Cheating Surveillance Application | [Link](#)

- A system designed to detect cheating during online interviews/exams by monitoring head and pupil movements and identifying unauthorized mobile phone usage.
- It uses **OpenCV** for video processing, **dlib** for facial landmark detection, and **YOLOv8** trained on the [Roboflow Cellphone Detection Dataset](#) to detect cellphones in real-time.

AirPointer | [Link](#)

- A real-time hand gesture-based cursor and browser navigation system. This system enables hands-free interaction, making it useful for accessibility, touchless control, and immersive experiences.
- It uses **MediaPipe** to track hand landmarks and **PyAutoGUI** to perform seamless navigation and cursor control without the need for a physical input device.

EDUCATION

The Islamia University of Bahawalpur

BSc (Honors) in Software Engineering – **CGPA 3.70/4.0**

Mudrass-Tul-Binat (MTB)

Fsc Pre-Engineering - **Marks 923/1100**

Data Science & AI Bootcamp | @atomcamp

Jan 24 – May 24

SKILLS

• **Programming Languages:**

- Python
- SQL

• **Libraries & Frameworks:**

- NumPy
- Seaborn
- Keras
- Pandas
- Pytorch
- TensorFlow
- Matplotlib
- Scikit-learn
- OpenCV
- Plotly
- PyTorch
- LangChain

• **Tools & Technologies:**

- Google Colab
- Anaconda
- VS Code

• **DevOps / MLOps**

- CI/CD Pipelines
- MLFlow
- Docker
